SUMMARY

CS graduate (2026, CGPA 8.48) who built PhishGuard AI — a 3-layer phishing detection system integrating Llama 3 70B for AI-driven decisioning, achieving 95.3% accuracy across 353,637+ URLs — shipped as a live Chrome extension. Also built DevPulse, a real-time automation-style dashboard with WebSocket-driven event workflows and Redis pub/sub caching. Currently in full-stack production engineering via an active internship. Seeking a role building real AI agent-driven automation and integration systems.

TECHNICAL SKILLS

Languages: JavaScript, SQL, Java (Basic)
Web Development: HTML, CSS, React.js, Node.js, Express.js, MongoDB, REST APIs, Bootstrap
AI & LLM Integration: Groq API, Llama 3 70B, NLP (custom heuristics)
Tools & Infrastructure: Git, PostgreSQL, Redis, Supabase, Render.com, Vercel

EXPERIENCE

Full Stack Developer Intern | Clustor Computing, Nagpur *Dec 2025 – July 2026*

- Build and maintain 3 production full-stack services using Node.js, Express.js, and MongoDB, serving live users with zero unplanned downtime during tenure.
- Optimize RESTful API architecture through query tuning and connection pooling, cutting average response latency by **35%** and scaling throughput to handle **3× concurrent load**.
- Ship production features across active sprint cycles, resolving critical bugs and hardening system reliability through root-cause analysis and targeted refactoring.

PROJECTS

PhishGuard AI — Real-Time Phishing Detection

Node.js · Llama 3 70B · NLP · Manifest V3 Chrome Extension

- Architected a 3-layer phishing detection system combining URL NLP heuristics, page content analysis, and Llama 3 70B AI inference — trained and evaluated on **353,637+ labeled URLs** across 7 public datasets.
- Achieved **95.3% overall accuracy** (F1: **95.7%**, Recall: **96.8%**) across 8 threat categories including brand impersonation, fake login pages, and IP-based phishing — with a **3.2% false positive rate**.
- Built a Manifest V3 Chrome extension backed by Node.js + Groq API pipeline, delivering phishing verdicts in under **1.5 seconds** on warm servers and under **10ms** for cached URLs via local browser storage.

TravelGenieAI — AI-Powered Travel Platform

MERN Stack · Groq Cloud LLM · Supabase · Upstash Redis

- Engineered an AI travel platform on MERN + Groq Cloud LLM that auto-generates full itineraries, reducing manual trip planning time from ~**2 hours to under 6 minutes** — a **95% reduction**.
- Architected MVC backend with JWT auth and Upstash Redis caching layer, boosting throughput by **30%** and cutting repeat search latency to under **50ms**.
- Implemented Supabase data persistence with row-level security, supporting **50+ concurrent test users** with zero auth-related incidents.

DevPulse — Real-Time GitHub Activity Dashboard

Node.js, React, WebSockets, Redis, GitHub OAuth

- Built a **real-time GitHub analytics dashboard** using **WebSocket push** and **Redis Pub/Sub**, reducing GitHub API calls by **80%** through event-driven cache invalidation across **10+ repositories**.
- Engineered a **Redis token-bucket rate limiter** sustaining concurrent WebSocket sessions with **zero throttled requests** under load.
- Visualized **commit frequency**, **streak tracking**, and **repository-level activity** using Chart.js, achieving **sub-100ms render time** on cached data.

EDUCATION

G.H. Raisoni University, Amravati *2022 – 2026*
B.Tech in Computer Science and Engineering CGPA: 8.48

Insight Junior College, Nagpur *2022*
Class XII 86.67%

ACHIEVEMENTS

- Solved LeetCode problems (start/medium) — strengthened core DSA patterns across arrays, sorting and searching, Linear Data Structures, and two pointer.
- Completed SQL challenge covering window functions, recursive CTEs, and multi-table aggregations.
- Authored undergraduate thesis and Research Paper on real-time phishing detection using NLP and LLM-based feature extraction — implemented as a working Chrome extension with live classification output.

CERTIFICATIONS

- AI & ML Workshop — DEF Institute, VNIT
